Xie, J. p67
Xu, Y.-W. p302

Y

Yoon, K.S. p23
Yuan, Y. p67

Z

Zhou, Y.-Y. p302
Zoffoli, S. p363

ACOUSTICS AND ULTRASONICS

Characterisation of wind field with high resolution in time and space by the use of electromagnetic and acoustic waves p49

ANTENNA ARRAYS

Doppler compensation in forward-looking STAP radar p253
Extraction of moving ground targets by a bistatic ultra-wideband SAR p35
Optimal adaptive processing for domain factorised element-digitised array radar p81
Robust adaptive array beamforming with random error in cycle frequency p193

ANTENNA THEORY

Robust adaptive array beamforming with random error in cycle frequency p193

ARRAY SIGNAL PROCESSING

Comparative study of five LMS-based adaptive time delay estimators p9
Efficient algorithm for localising 3-D narrowband multiple sources p23
Low-complexity estimator for four-dimensional parameters under a reparameterised distributed source model p313
Optimal adaptive processing for domain factorised element-digitised array radar p81
Robust adaptive array beamforming with random error in cycle frequency p193
Time-delay estimation for sinusoidal signals p318

COMMUNICATION SYSTEM THEORY

Communication structure planning for multisensor detection systems p2

COMPUTATIONAL COMPLEXITY

Comparative study of five LMS-based adaptive time delay estimators p9

EARTH SCIENCES

Characterisation of wind field with high resolution in time and space by the use of electromagnetic and acoustic waves p49
Doppler modelling of radar sea clutter p73
Frequency and noise dependence of the image reconstruction of ground surfaces using the conjugate gradient based algorithm p211
Maximum likelihood approach to the detection of changes between multitemporal SAR images p200
Sea-wave fractal spectrum for SAR remote sensing p56
Tomographic imaging of isolated ground surfaces using radio ground waves and conjugate gradient methods p27

ELECTROMAGNETIC COMPATIBILITY

Extraction of moving ground targets by a bistatic ultra-wideband SAR p35
Optimal adaptive processing for domain factorised element-digitised array radar p81

ELECTROMAGNETIC WAVES

Characterisation of wind field with high resolution in time and space by the use of electromagnetic and acoustic waves p49
Doppler modelling of radar sea clutter p73
Extraction of moving ground targets by a bistatic ultra-wideband SAR p35
Multipath scattering from complex targets p343
Radar target identification using one-dimensional scattering centres p285
Random wave and Schell model for the mean RCS of bent chaotic ducts with a homogeneous scattered aperture field distribution p338

ERRORS AND ERROR ANALYSIS

Optimisation and sensitivity analysis of GPS receiver tracking loops in dynamic environments p241
Robust adaptive array beamforming with random error in cycle frequency p193

FILTERS AND FILTERING

2-D data extrapolation for high resolution radar imaging using autoregressive lattice modelling p277
Comparative study of five LMS-based adaptive time delay estimators p9
Investigation into the use of nonlinear predictor networks to improve the performance of maritime surveillance radar target detectors p103
Maximum likelihood approach to the detection of changes between multitemporal SAR images p200
New approach for hybrid strip-map/spotlight SAR data focusing p363
New data association method for automotive radar tracking p297
Optimal adaptive processing for domain factorised element-digitised array radar p81
Optimisation and sensitivity analysis of GPS receiver tracking loops in dynamic environments p241
Pseudo-linear estimator for bearings-only passive target tracking p16
Radio disturbance suppression for HF radar p89
Reduced bandwidth algorithm for near field imaging of tree targets using synthetic aperture radar p259

INTERFERENCE SUPPRESSION

Experimental analysis of sea clutter in shipborne HFSWR p67
Optimal adaptive processing for domain factorised element-digitised array radar p81
Radio disturbance suppression for HF radar p89

MATHEMATICAL TECHNIQUES

Extraction of moving ground targets by a bistatic ultra-wideband SAR p35

MEASUREMENT OF SPECIFIC VARIABLES

Passive location method and accuracy analysis with phase difference rate measurements p302

MEASUREMENT SCIENCE

Passive location method and accuracy analysis with phase difference rate measurements p302

MILITARY SYSTEMS

Simulator for advanced fighter radar EPM development p139

NEURAL NETWORKS

Investigation into the use of nonlinear predictor networks to improve the performance of maritime surveillance radar target detectors p103

NUMERICAL ANALYSIS

2-D data extrapolation for high resolution radar imaging using autoregressive lattice modelling p277
Comparative study of five LMS-based adaptive time delay estimators p9
Development of a statistical procedure for detecting the number of signals in a radar measurement p219
Efficient algorithm for localising 3-D narrowband multiple sources p23
Experimental analysis of sea clutter in shipborne HFSWR p67
Frequency and noise dependence of the image reconstruction of ground surfaces using the conjugate gradient based algorithm p211
Improved surrogate data tests for sea clutter p112
Radar target identification using one-dimensional scattering centres p285
Robust adaptive array beamforming with random error in cycle frequency p193
Robust CFAR detection of random signals in compound-Gaussian clutter plus thermal noise p227
Sea-wave fractal spectrum for SAR remote sensing p56
Time-delay estimation for sinusoidal signals p318
Tomographic imaging of isolated ground surfaces using radio ground waves and conjugate gradient methods p27

OPTICAL IMAGE PROCESSING

2-D data extrapolation for high resolution radar imaging using autoregressive lattice modelling p277
Analysis of distortion in the high range resolution profile from a perturbed target p353
Contextual information in SAR target detection p41
Frequency and noise dependence of the image reconstruction of ground surfaces using the conjugate gradient based algorithm p211
High-resolution autofocus techniques for SAR imaging based on fractional lower-order statistics p267
New approach for hybrid strip-map/spotlight SAR data focusing p363
Parameter estimation for the K-distribution based on [z log(z)] p309
Reduced bandwidth algorithm for near field imaging of tree targets using synthetic aperture radar p259
SAR imaging of buried objects from MoM modelled scattered field p167
Segmentation-based technique for ship detection in SAR images p147
Simulation of ISAR imaging of moving targets p160

OPTIMISATION

Communication structure planning for multisensor detection systems p2
Enhanced target detection and identification via optimised radar transmission pulse shape p130
Maximum likelihood approach to the detection of changes between multitemporal SAR images p200
Optimal adaptive processing for domain factorised element-digitised array radar p81
Optimisation and sensitivity analysis of GPS receiver tracking loops in dynamic environments p241

PARAMETER ESTIMATION

Parameter estimation for the K-distribution based on [z log(z)] p309

PATTERN RECOGNITION

Maximum likelihood approach to the detection of changes between multitemporal SAR images p200

RADAR AND RADIONAVIGATION

Doppler compensation in forward-looking STAP radar p253
Enhanced target detection and identification via optimised radar transmission pulse shape p130
Evaluation of a weather clutter simulation p119
Group delay effects on the performance of wideband CW-LFM radars p95
Investigation into the use of nonlinear predictor networks to improve the performance of maritime surveillance radar target detectors p103
Maximum likelihood approach to the detection of changes between multitemporal SAR images p200
Microwave detection of buried mines using non-contact, synthetic near-field focusing p233
Radio disturbance suppression for HF radar p89
Sea-wave fractal spectrum for SAR remote sensing p56
Segmentation-based technique for ship detection in SAR images p147
Simulation of ISAR imaging of moving targets p160
Simulator for advanced fighter radar EPM development p139

RADAR CLUTTER

Contextual information in SAR target detection p41
Doppler compensation in forward-looking STAP radar p253
Doppler modelling of radar sea clutter p73
Evaluation of a weather clutter simulation p119
Experimental analysis of sea clutter in shipborne HFSWR p67
Extraction of moving ground targets by a bistatic ultra-wideband SAR p35
Ground target tracking with STAP radar p173
High-resolution autofocus techniques for SAR imaging based on fractional lower-order statistics p267
Improved surrogate data tests for sea clutter p112
Investigation into the use of nonlinear predictor networks to improve the performance of maritime surveillance radar target detectors p103
Microwave detection of buried mines using non-contact, synthetic near-field focusing p233
New data association method for automotive radar tracking p297
Optimal adaptive processing for domain factorised element-digitised array radar p81
Probabilistic modelling of bistatic Doppler shift p348
Robust CFAR detection of random signals in compound-Gaussian clutter plus thermal noise p227
SAR imaging of buried objects from MoM modelled scattered field p167
Segmentation-based technique for ship detection in SAR images p147
Simulator for advanced fighter radar EPM development p139

RADAR THEORY

2-D data extrapolation for high resolution radar imaging using autoregressive lattice modelling p277
Analysis of distortion in the high range resolution profile from a perturbed target p353
Contextual information in SAR target detection p41
Development of a statistical procedure for detecting the number of signals in a radar measurement p219
Doppler compensation in forward-looking STAP radar p253
Doppler modelling of radar sea clutter p73
Enhanced target detection and identification via optimised radar transmission pulse shape p130
Experimental analysis of sea clutter in shipborne HFSWR p67
Extraction of moving ground targets by a bistatic ultra-wideband SAR p35
Fast simulation of smallest-of and geometric-mean CFAR detectors p186
Ground target tracking with STAP radar p173
Group delay effects on the performance of wideband CW-LFM radars p95
High-resolution autofocus techniques for SAR imaging based on fractional lower-order statistics p267
Improved surrogate data tests for sea clutter p112
Investigation into the use of nonlinear predictor networks to improve the performance of maritime surveillance radar target detectors p103
Maximum likelihood approach to the detection of changes between multitemporal SAR images p200
Multipath scattering from complex targets p343
New approach for hybrid strip-map/spotlight SAR data focusing p363
New data association method for automotive radar tracking p297
Optimal adaptive processing for domain factorised element-digitised array radar p81
Parameter estimation for the K-distribution based on [z log(z)] p309
Probabilistic modelling of bistatic Doppler shift p348
Radar target identification using one-dimensional scattering centres p285
Radio disturbance suppression for HF radar p89
Random wave and Schell model for the mean RCS of bent chaotic ducts with a homogeneous scattered aperture field distribution p338
Random wave methods for the prediction of the RCS of homogeneous chaotic straight ducts p331
Reduced bandwidth algorithm for near field imaging of tree targets using synthetic aperture radar p259
Robust CFAR detection of random signals in compound-Gaussian clutter plus thermal noise p227
SAR imaging of buried objects from MoM modelled scattered field p167
Sea-wave fractal spectrum for SAR remote sensing p56
Segmentation-based technique for ship detection in SAR images p147
Simulation of ISAR imaging of moving targets p160
Simulator for advanced fighter radar EPM development p139

RADIO DIRECTION-FINDING

Optimisation and sensitivity analysis of GPS receiver tracking loops in dynamic environments p241
Passive location method and accuracy analysis with phase difference rate measurements p302

RADIO SYSTEMS

Optimisation and sensitivity analysis of GPS receiver tracking loops in dynamic environments p241

RADIOWAVE PROPAGATION

Frequency and noise dependence of the image reconstruction of ground surfaces using the conjugate gradient based algorithm p211
Tomographic imaging of isolated ground surfaces using radio ground waves and conjugate gradient methods p27

SENSORS AND ACTUATORS

Communication structure planning for multisensor detection systems p2

SIGNAL DETECTION

Communication structure planning for multisensor detection systems p2
Contextual information in SAR target detection p41
Experimental analysis of sea clutter in shipborne HFSWR p67
Fast simulation of smallest-of and geometric-mean CFAR detectors p186
Ground target tracking with STAP radar p173
Probabilistic modelling of bistatic Doppler shift p348
Robust CFAR detection of random signals in compound-Gaussian clutter plus thermal noise p227

SIGNAL PROCESSING

Ambiguities in the harmonic retrieval problem using non-uniform sampling p325
Comparative study of five LMS-based adaptive time delay estimators p9
Development of a statistical procedure for detecting the number of signals in a radar measurement p219
Doppler compensation in forward-looking STAP radar p253
Efficient algorithm for localising 3-D narrowband multiple sources p23
Enhanced target detection and identification via optimised radar transmission pulse shape p130
Extraction of moving ground targets by a bistatic ultra-wideband SAR p35
Ground target tracking with STAP radar p173
Investigation into the use of nonlinear predictor networks to improve the performance of maritime surveillance radar target detectors p103
Low-complexity estimator for four-dimensional parameters under a reparameterised distributed source model p313
Passive location method and accuracy analysis with phase difference rate measurements p302
Pseudo-linear estimator for bearings-only passive target tracking p16
Radar target identification using one-dimensional scattering centres p285
Robust adaptive array beamforming with random error in cycle frequency p193
Simulator for advanced fighter radar EPM development p139
Time-delay estimation for sinusoidal signals p318

STATISTICAL ANALYSIS

2-D data extrapolation for high resolution radar imaging using autoregressive lattice modelling p277
Ambiguities in the harmonic retrieval problem using non-uniform sampling p325
Communication structure planning for multisensor detection systems p2
Comparative study of five LMS-based adaptive time delay estimators p9
Development of a statistical procedure for detecting the number of signals in a radar measurement p219
Fast simulation of smallest-of and geometric-mean CFAR detectors p186
High-resolution autofocus techniques for SAR imaging based on fractional lower-order statistics p267
Improved surrogate data tests for sea clutter p112
Maximum likelihood approach to the detection of changes between multitemporal SAR images p200
New data association method for automotive radar tracking p297
Parameter estimation for the K-distribution based on [z log(z)] p309
Probabilistic modelling of bistatic Doppler shift p348
Pseudo-linear estimator for bearings-only passive target tracking p16
Radar target identification using one-dimensional scattering centres p285
Random wave and Schell model for the mean RCS of bent chaotic ducts with a homogeneous scattered aperture field distribution p338
Robust adaptive array beamforming with random error in cycle frequency p193
Robust CFAR detection of random signals in compound-Gaussian clutter plus thermal noise p227
SAR imaging of buried objects from MoM modelled scattered field p167
Time-delay estimation for sinusoidal signals p318
